

Data communication for medical devices!

You have invested a lot of effort into your laboratory diagnostics, and the data from your devices is still not automatically transferred to your existing IT system? Some devices are stand-alone and you have to manually document the data by using data sheets?

Meditrac™ is the data communicator for medical devices ensuring automatic, fast and cost efficient data communication.

For 15 years, laboratory staff has been using ***Meditrac™*** in order to automatically transfer all their medical device data to the electronic patient record. Therefore ***Meditrac™*** communicates to all IT device protocols such as HL7, POCT 1A, ASTM etc. and transfers the data safely to the existing IT system (LIS, HIS, PDMS etc.). It easily manages connections to more than 200 laboratory, medical and Point-of-Care devices from various manufacturers.

Your advantages at a glance:

- :: Automatic, secure and fast data communication***
- :: More than 200 device interfaces of 40 manufacturers available***
- :: Extendible software solution for the future***

Do you have more connectivity needs?

The high flexibility of ***Meditrac™*** also allows in conjunction with ***POCcelerator™*** the Point of Care data manger, the technical validation of all medical data according to your requirements. Please find further information about our complete product range on our website www.conworx.com or contact us directly.

The Meditrac™ data platform: One communication solution for all devices.

Your advantages

- Fast and accurate transfer of all measured data into the electronic patient record (LIS, HIS, PDMS, etc.)
- Increased data safety by reducing manual processes
- Time saving for clinical staff
- Decreased resource and IT costs, driven by centralized infrastructure

Max. Flexibility

- Continual new medical device interfaces available
- Safe investment in an independent solution to ensure future device connectivity

Additional modules

- Validation of all patient case numbers and order numbers
- Central storage for medical device audit and error history
- Traffic light system for simple, proactive error notifications
- Technical validation of all devices (If supported by the device)

and more....

- E-Learning Solution for training and operator certification
- Central user management for medical devices
- Overview of training status of each devices

Time saving efficiencies for clinical staff

CONWORX - your specialist.

Since 1999 we have developed software solutions for the integration of laboratory and medical equipment together with efficient and effective data management. Today we are one of the leading providers of IT solutions, being used in over 1700¹ hospitals in 20 countries. We provide an extensive know-how incorporating all relevant technological and healthcare standards as well as data processing gateways across the complete healthcare sector. Our expert knowledge and clear focus on medical diagnostics help to drive the efficiency and quality of our clients' operations.
